

Pleasant Lake Watershed Restoration Project Presentation July 23, 2016 Deerfield Town Hall

As part of the Pleasant Lake Preservation Association's Annual Meeting there will be a Watershed Restoration Plan (WRP) presentation and workshop open to the public. The WRP presentation will commence by 10 AM (preceded by the PLPA Annual Meeting starting at 9 AM) and will help answer the following questions.

- **What is watershed planning?**
- **Why did we need it for Pleasant Lake?**
- **What was involved in the process?**
- **What are the next steps?**
- **What can I do to help?**

The Pleasant Lake Watershed Restoration Plan began over a year ago to ensure future generations can enjoy the lake like we do today. The concept was to understand the impact of stormwater runoff from the watershed into the lake, to set water quality goals, and to prioritize best management practices that will protect the water quality. Funding for the project is being provided by NH Department of Environmental Services. At this meeting watershed scientist, Forrest Bell, will provide an update on the results they have compiled and facilitate breakout sessions to build stakeholder awareness and consensus on next steps. Citizens of the Towns of Northwood and Deerfield are welcome to attend and participate in this workshop.

Forrest Bell is the owner of FB Environmental Associates and has been leading successful watershed restoration projects since 1992. He has worked collaboratively with local expert Don Kretchmer on several lake projects in New Hampshire. They will provide an interesting and informative presentation and workshop highlighting the key components of our Watershed Restoration Plan.

Please join us on July 23rd at the Deerfield Town Hall!
